Can the NHS harness the momentum of increased digital health spending?

LaingBuisson has published the third edition of its *Digital Health UK* market report. Containing new and rebased data, the report provides the most accurate picture of the market available and gives full consideration to the impact that the pandemic has had on the adoption (or not) of different technologies, cutting through the myth to shine a light on the reality.

The report is vital reading to anyone with an interest in this emerging market, be they an investor, an advisor, a large corporate supplier, a health tech start-up, or someone working within procurement or IT within the healthcare sector.

The report offers insight into the current state of the UK healthcare sector's digital transformation, and the potential benefits of scaling and penetrating existing proven technologies across the whole NHS. While digital health spending as a percentage of the overall healthcare budget has increased since 2020, we argue; is it enough to encourage a full-scale adoption of digital technology and construct a solid foundation for the NHS to build upon?

The report contains the latest available data and expert insights on:

- Patient Admission Systems (PAS)
- Electronic Patient Records/Electronic Medical Records (EPR/EMR)
- Specialist clinical systems
- Digital apps
- Wearables
- Artificial intelligence
- Interoperability across systems and sectors
- Pathology and radiology

It also provides insight into the UK's largest purchaser of digital health, the NHS, how it works, how it is funded, its regulation and political considerations.

Who is the report for

- CEOs and Boards of NHS Trusts and independent healthcare providers
- CIOs/CTOs of NHS Trusts and independent healthcare providers
- Procurement leads in NHS Trusts
- Regulators
- Large IT suppliers
- Healthcare IT start-ups
- Banks and investors
- Management consultants
- Business advisors
- Central government
- Think tanks
- Policy writers

What the report covers
